

1 in 10 Canadians can't afford to fill their prescriptions

Drug costs are rising at 4.7% every year and 20–25% of this cost comes from dispensing fees and markups. As a result, the average Canadian spends over \$1,000 per year on medications.

How PocketPills Saves You Money

We use automation technology to sort, manage, and fill prescriptions. † This frees up our pharmacists and lowers our prices. Along with free medication delivery, you get:

- A low \$7 dispensing fee
- Low storefront markups
- To search the cost of medication before filling
- Coverage is coordinated with your group benefits plan and province*

* For residents of Saskatchewan, we are able to dispense and deliver your medications. However, if you are eligible for Pharmacare, the province is not able to coordinate with PocketPills yet, and we recommend you continue using your current pharmacy. For residents of Quebec, PocketPills is planning to launch later this year.

Switching to a simpler pharmacy is easy!

- 1 Sign up online at app.pocketpills.com/HUB
- 2 We'll transfer your refills†
- 3 Your medications are delivered for free
- 4 We work with your doctor to renew your prescriptions

† PocketPills cannot deliver controlled substances nor narcotics; we recommend you continue to use your current pharmacy for these types of drugs.

POCKETPILLS

Pharmacy Just Got Easier

Medication Made Easy

Sorted by the dose and delivered, free of charge.

It's Simple.

PocketPills sorts your medications by dose into packets called PocketPacks, and delivers them for free.

It's Convenient.

Your refills arrive before you run out and you can track your orders online.

It's Easy.

PocketPacks are easy to open and help you take your medications on time, as prescribed.
